- Notes: 1. Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.  
 2. The device is guaranteed to meet performance specification within  $0^\circ\text{C} \sim 70^\circ\text{C}$  operating temperature range and assured by design from  $-20^\circ\text{C} \sim 85^\circ\text{C}$ .  
 3. Although not recommended, off-state voltages up to 800V may be applied without damage, but the triac may switch to the on-state. The rate of rise of current should not exceed  $3\text{A}/\mu\text{s}$ .
